Flight Brief

TACF-04

- **Brief**

- a. QOD (NATOPS / EP / SOP)
- b. Control Zone
- c. Pursuit Curves

- **Practice**

- a. Combat checks
- b. Voice communications
- c. Formation
- d. Defensive combat spread
- e. Check turns
- f. Shackle turns / Off Heading Shackle Turns
- g. Cruise turns
- h. Tactical turns
- i. In-Place turns
- j. Cross turns
- k. Loose deuce exercise
- l. Displacement roll / reversal
- m. Gunsight tracking exercise
- n. Unknown airspeed rendezvous
- o. Situational awareness
- p. Lead (if flown)
- q. Precautionary approach (emergency instrument approach desired)
- r. Roll-and-go, full flaps / slats
- s. Touch and go landings

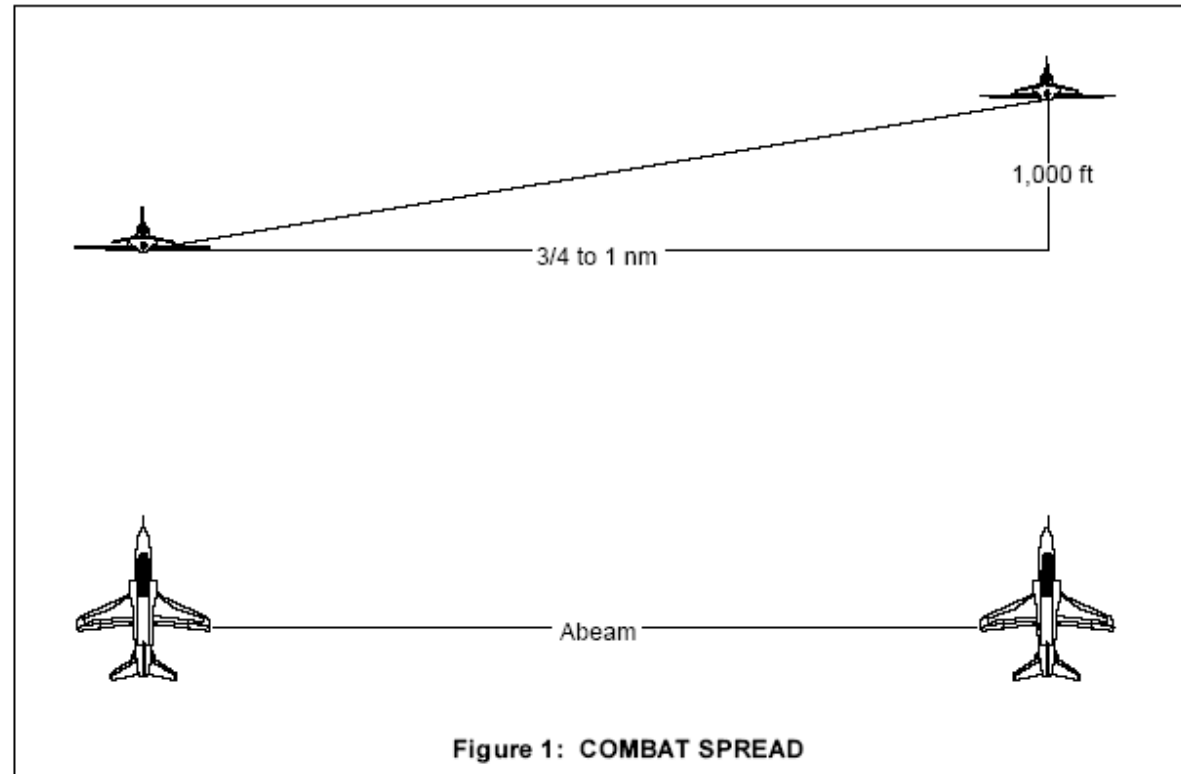

TACF-04

Combat Spread

- What is it?

- How to get there

- Check your heading, generate an airspeed advantage, and take a 10-15° cut away from the lead.

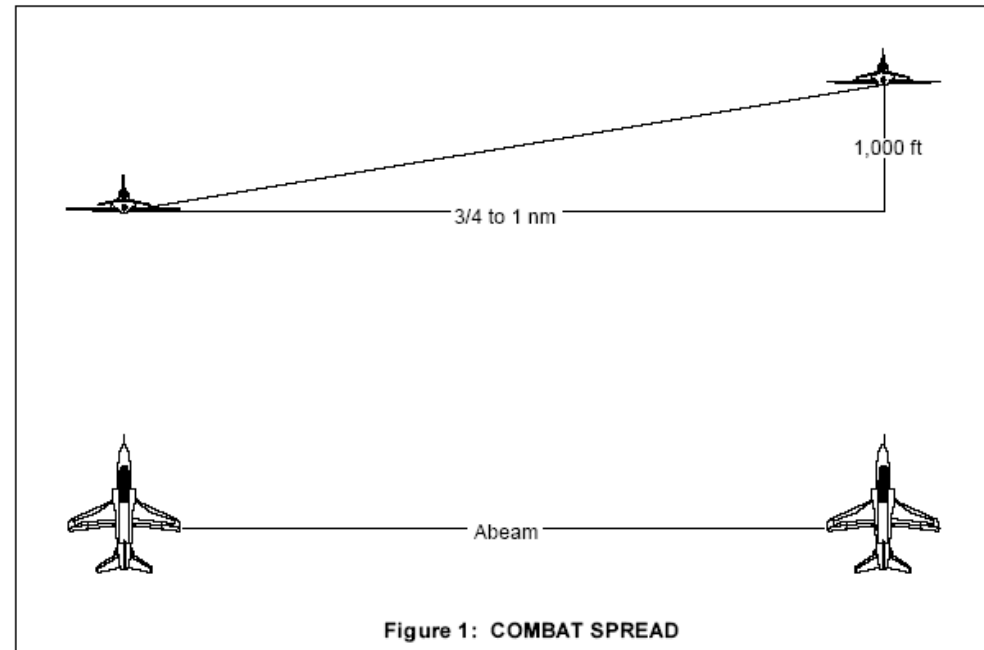

TACF-04

Maintaining Combat Spread

- **Priorities**

- **1. Bearing Line**
 - **Airspeed dependent**(may need to account for a 5 kt TAS difference with 1000' of altitude difference)
- **2. Abeam distance**
- **3. Altitude**

TACF-04

Combat Spread Corrections

- **If Sucked**
 - Wingman needs to accelerate via unload and power addition to reach bearing line.
- **If Acute**
 - Wingman needs to decelerate. Different techniques available: 1) Climb to decelerate or 2) maintain altitude, take a cut away and then back into lead to slow downrange travel.
- **If wide or acute,**
 - Wingman needs to fly toward or away as appropriate. Care should be given to add enough airspeed and not to turn too much, as doing so will trade the wingman's wide or tight for a sucked position.

TACF-04

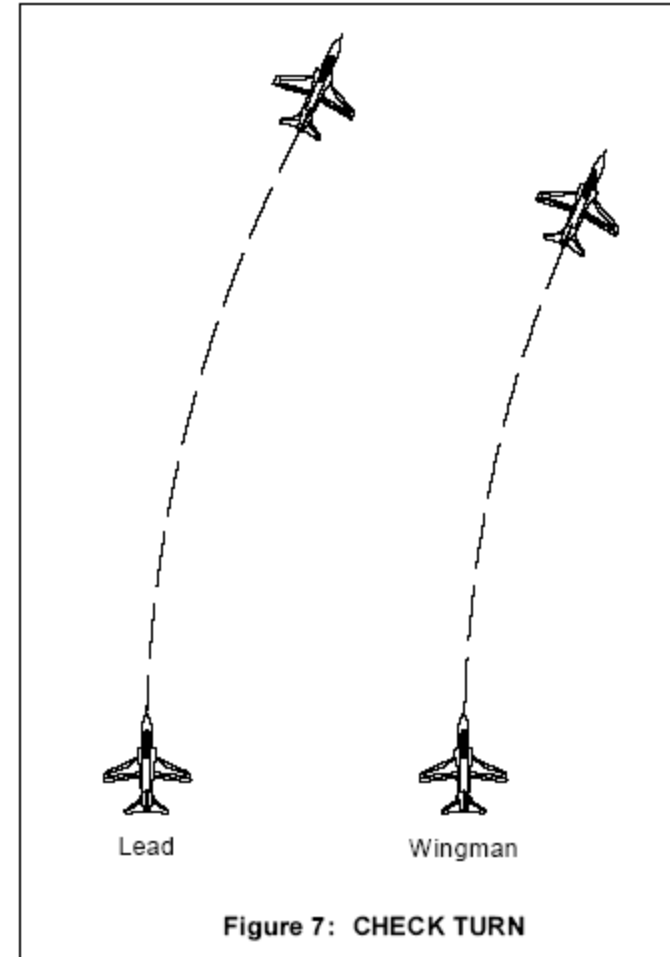

Check Turns

- Intro

- Turn will make you acute.
- Multiple techniques to fix position.
- Big Picture: Slow your down range travel compared to lead, then fix your altitude and abeam distance.

- Away

- Turn will make you sucked.
- Big Picture: Increase your down range travel compared to the lead (ie. lower your nose and increase your airspeed), then fix your altitude and abeam distance.

TACF-04

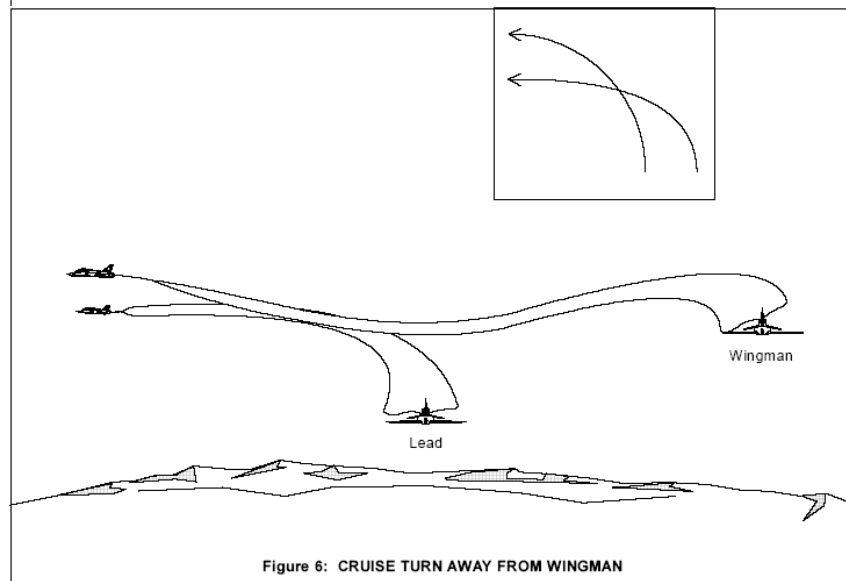

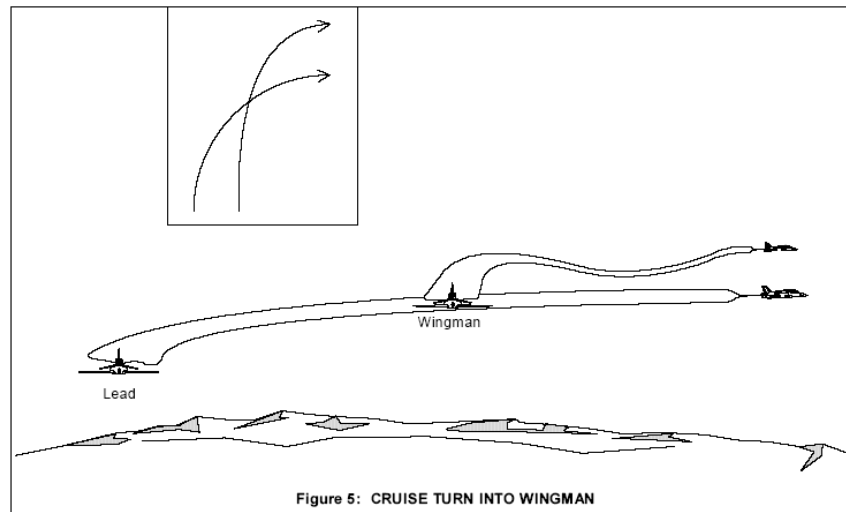

Cruise Turns

- Into

- **15° AOB until lead disappears under wing for 2-4 seconds, then 45° AOB.**
- **Corrections**
 - **Sucked / Acute**
 - **Wide / Tight**

- Away

- **45° AOB until crossing lead's 6 at 2k, then 15° AOB.**
- **Corrections**
 - **Sucked / Acute**
 - **Wide / Tight**

TACF-04

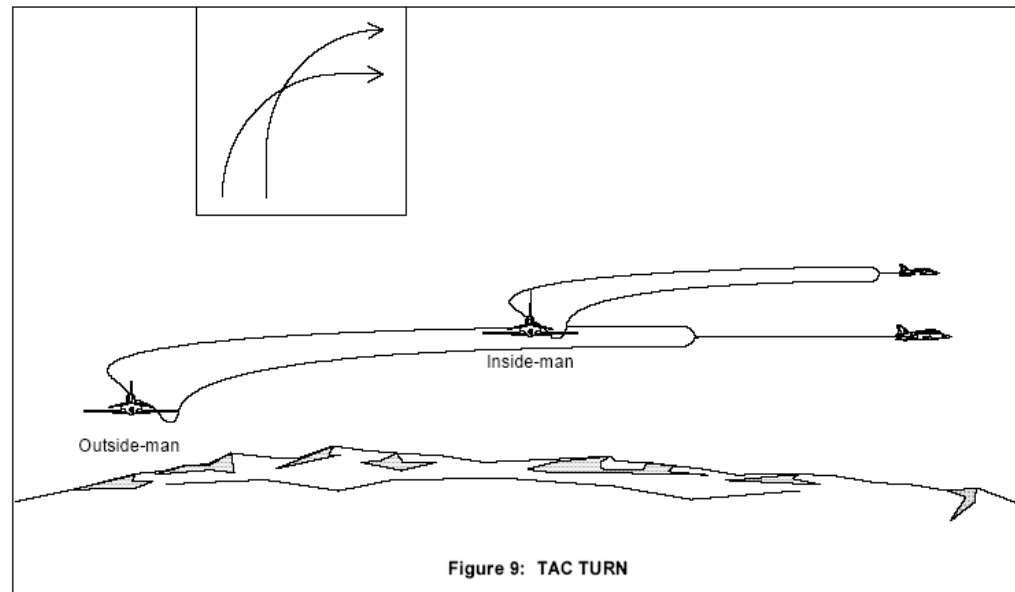

Tactical Turns

- Intro

- Wait until looking down lead's intakes.
- Start a level 14 unit pull to the new heading while maintaining 300 kts.
- Adjust timing of turn, amount of pull, and airspeed as necessary to come out of turn in position.

- Away

- Start a level 14 unit pull to the new heading while maintaining 300 kts.
- Make adjustments to fix positioning.

TACF-04

In-Place Turns

- Intro

- Make a level 14 unit turn for 180° , maintain 300 kts.
- Corrections for sucked / acute start.

- Away

- Make a level 14 unit turn for 180° , maintain 300 kts.
- Corrections for sucked / acute start.
- Do **NOT** float the turn when belly up to lead!

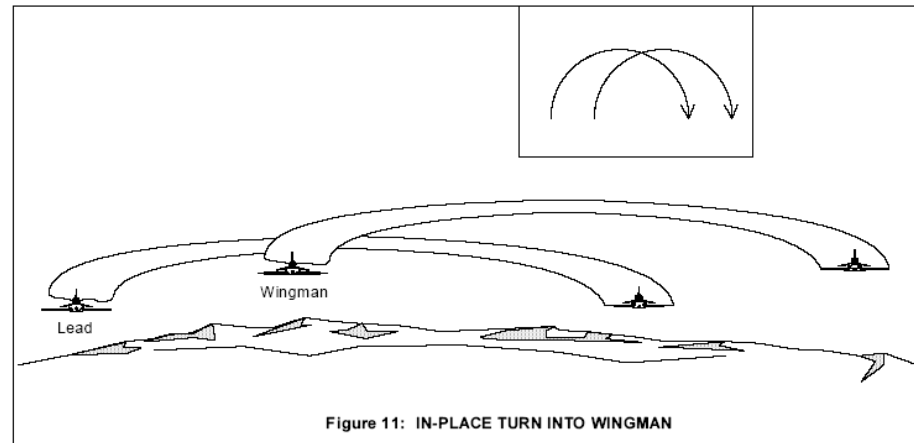

Figure 11: IN-PLACE TURN INTO WINGMAN

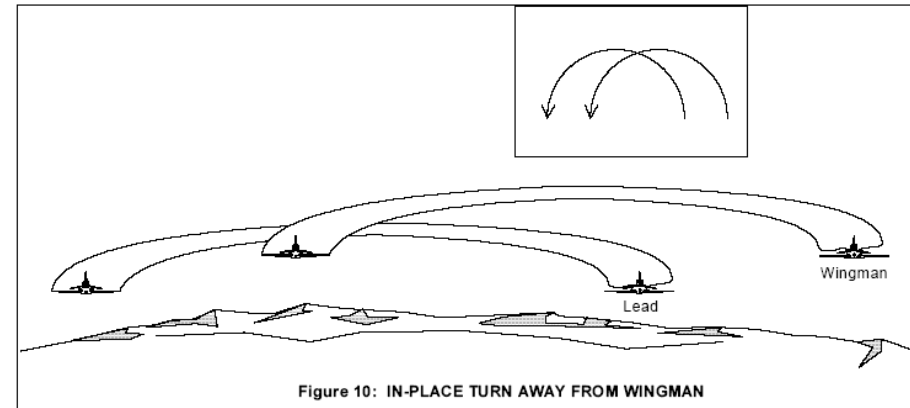

Figure 10: IN-PLACE TURN AWAY FROM WINGMAN

TACF-04

Shackle Turns

- **14 unit level turn into lead, putting the original heading on the 45° benchmark (or as appropriate to help fix your position).**
- **Maintain 300 kts keeping altitude separation from lead.**
- **Wait approx 2 sec then pull 14 units back to the original heading. (Corrections for sucked / acute.**

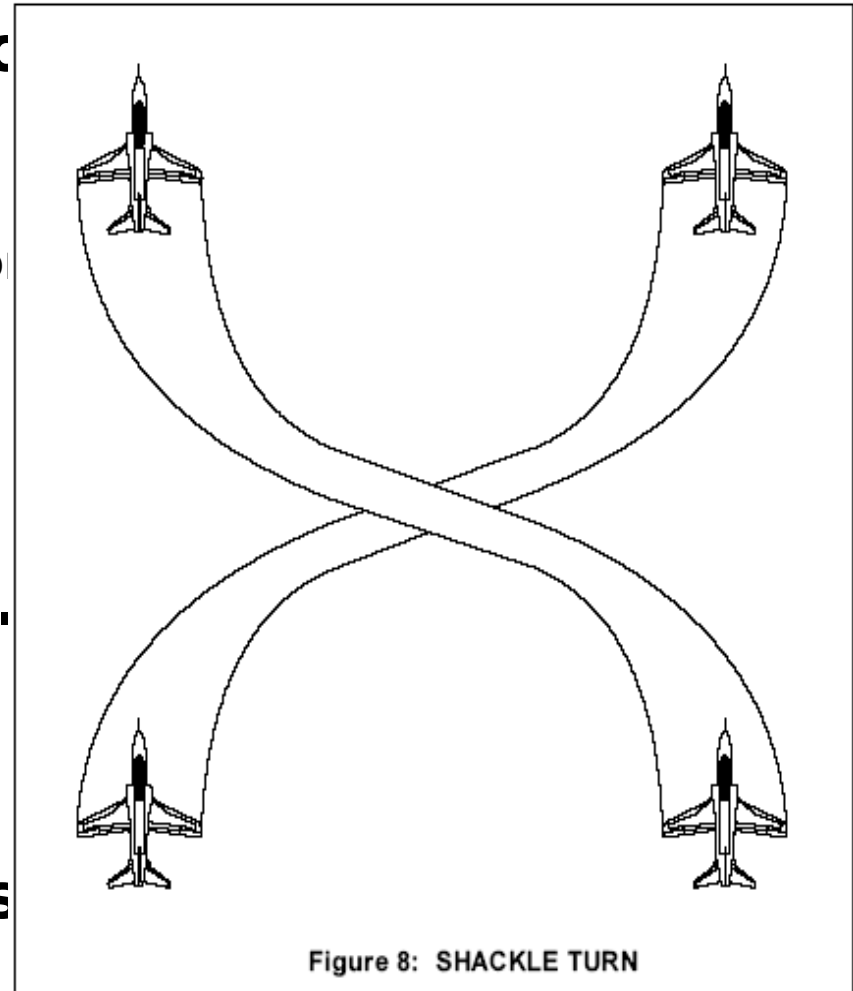

Figure 8: SHACKLE TURN

TACF-04

Off Heading Shackle Turns

- **Turn to 45° past eventual heading.**
- **If wingman's turn is less than 45°, delay reversal.**
- **If wingman's turn is greater than 45°, then reverse upon reaching reversal heading.**

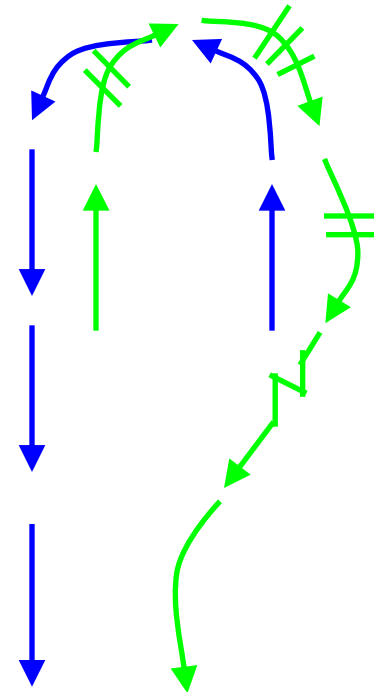

TACF-04

Cross Turns

- **17 unit, nibble of buffet pull into lead.**
- **Must maintain 500' of separation from lead. Overbank to 135deg after flight cross.**
- **Use altitude to gain an airspeed advantage and fix your position.**
- **Corrections for sucked / acute start.**

TACF-04

Loose Deuce

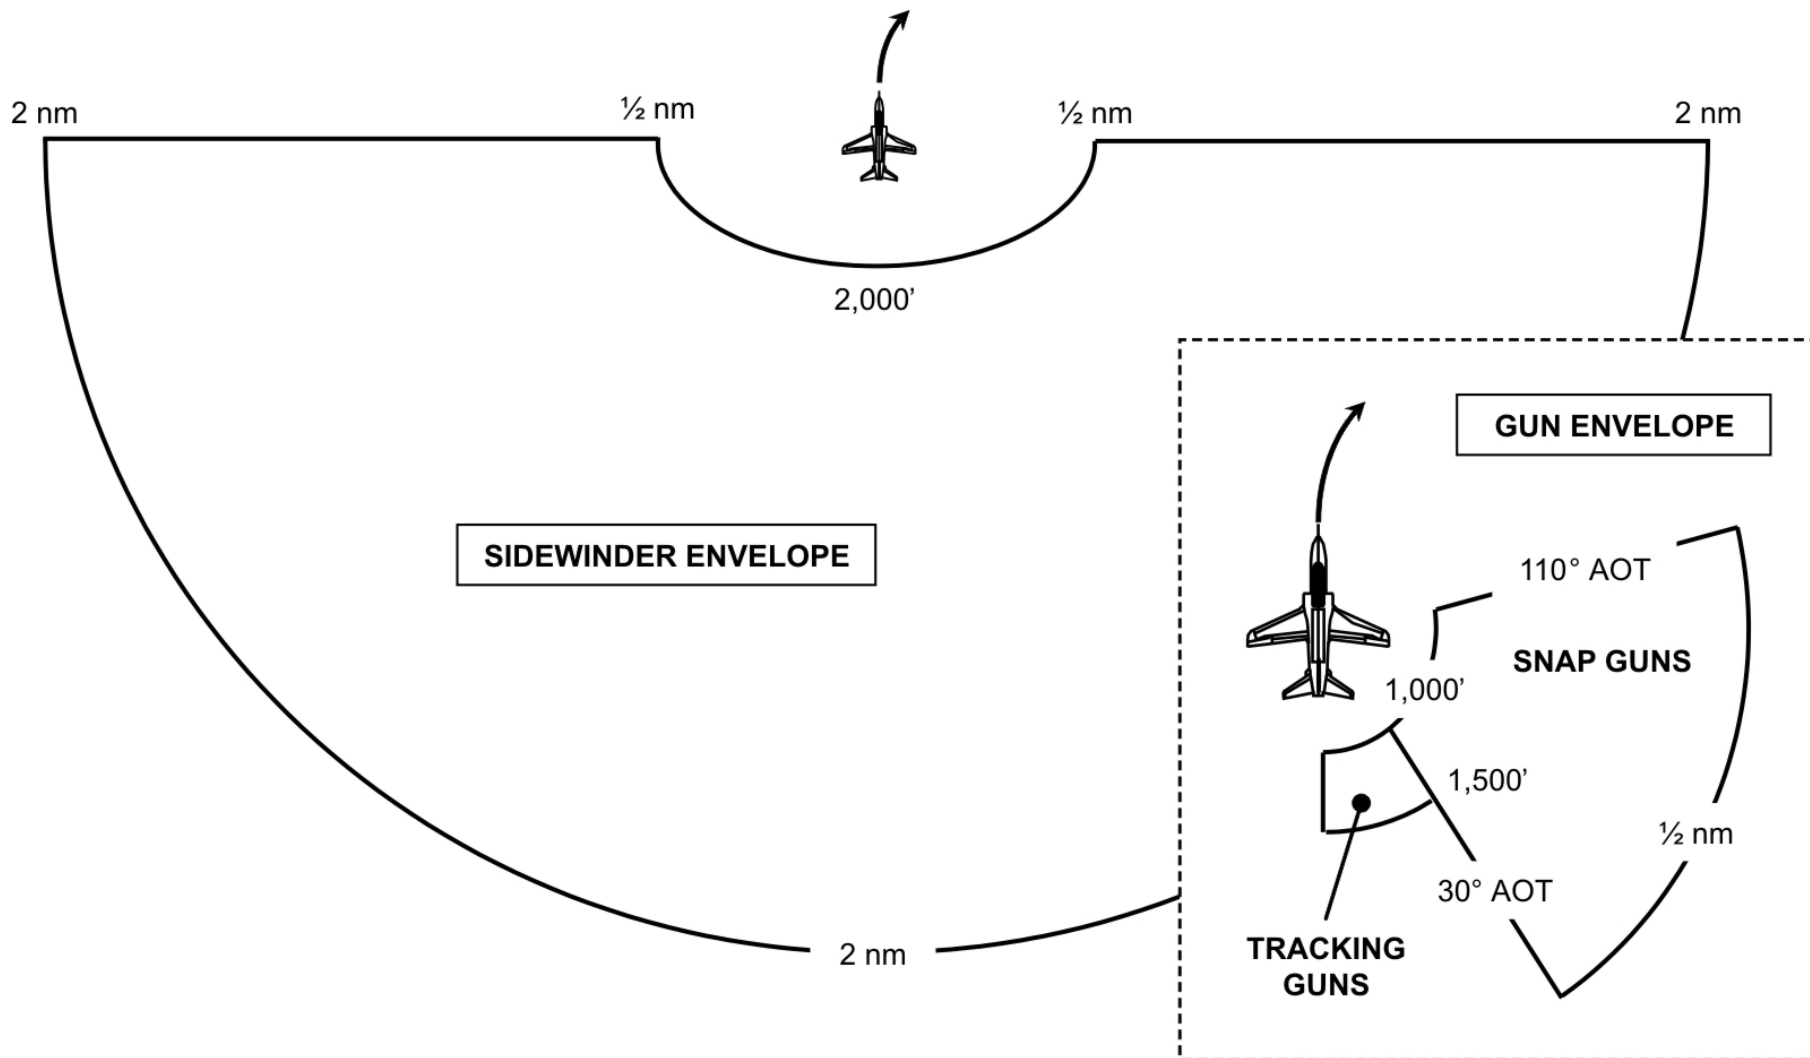

- **Started with a Tac turn into the wing.**
- **Before it is time for wing to turn, lead will call break turn with the bandit at the wing's 5 or 7 o'clock high. Wing should make a hard turn into the bandit.**
- **Lead tells wing to reverse and calls out his position.**
- **Use a series of High and Low Yo-Yo's to remain in position behind the lead, while keeping a good energy package on the aircraft. Report High Cover and Low Cover as appropriate.**
- **Trunk IP will call for a reversal, lead will reverse when wing reports "Roger reverse".**
- **If at low cover, wing turns with lead and moves to high cover at appropriate time. If at high cover, perform either a displacement roll or a reversal as appropriate.**
- **When trunk IP decides, swap roles.**

TACF-04

Weapons Envelope

TACF-04

Unknown Airspeed Rendezvous

- **Continue flying good Tacform until Fenced Out (Master Arm off with Gun deselected and the HUD back in the normal mode) and cleared to join by the lead.**
 - **When joining, make the rendezvous look like one that you have practiced before. Keep an altitude sanctuary until it is suit cased.**
 - **Lead will be setting the power and turning to put the RTB heading on the nose.**
 - **The join will be either a running rendezvous, CV rendezvous, or a combination.**

TACF-04

COORDINATION BRIEF

- **All members of flight required to attend the rest of the brief**

TACF-04

STANDARD DEBRIEFING FORMAT

- The Flight Lead or Pilot-in-Command is responsible for ensuring all flight or crewmembers are thoroughly debriefed on the conduct of the mission utilizing the “S-P-B-E-MS-LL” format outlined below. (Refer to the CTW-1/CTW-2 Expanding Debriefing Guide for specific objectives).
-
- I. Safety
 - II. Planning
 - III. Brief
 - IV. Execution
 - V. Mission Success
 - VI. Lessons Learned
